

July 20, 2010

To: Experimental Spokespersons (with stage 2 Approval)
Operations
Division Heads

I would like to prepare the fall 2010 beam schedule (118) for both base and ISAC programs with:

- run high-intensity beams from October 1st to December 1st
- run low-intensity beams from December 2nd to 21st (8:30 a.m.)
- shutdown beginning December 22nd

The three ISAC targets that we are presently planning to run this fall are: 1) a low-powered SiC target coupled to a SURFACE ion source, 2) a high-powered Nb foil target coupled to a surface source and 3) a low powered UC_x target coupled to a FEBIAD ion source for beam development and possible experiments. During the beam development run, about 1 week of discretionary beam time will be available for stage 1 approved experiments provided the yields required have been demonstrated.

Please submit your beam requests for Schedule 118, using the online facility at:

<http://mis.triumf.ca/beam/request>

NOTE: Please indicate clearly when you CANNOT take beam time.

The firm deadline for submissions is midnight Vancouver time (23:59), August 13th, 2010.

A draft schedule will be posted August 23rd, and the final scheduling meeting will be held on Thursday, August 26th, 2010.

Sincerely,

Gordon C. Ball
Science Division Head
