**RE: Call for Beam Requests for Schedule 131
September 11th to December 23rd, 2016**

We hereby invite beam requests for Schedule 131, which will start on September 11th, 2016 and run through December 23rd, 2016.

ISAC program (Nuclear Physics and β NMR):

We are considering scheduling targets and ion sources for both production and development. All standard target ion source combinations are available, though target module limitations will prevent scheduling any beams requiring a bias above 54 kV. The target choices and sequence are not yet fixed and will depend on forthcoming beam requests. For questions regarding specific requirements please contact me.

Centre for Molecular and Materials Science program (muons):

We are only considering requests for experiments using surface muons on the M15 and M20 beamlines. The schedule for μ SR experiments will be prepared by Iain McKenzie.

The deadline for requesting beam time during Schedule 131 is June 23rd, 2016 at 23:59 PST.

We plan to release a draft schedule on July 22nd, 2016 and hold the final scheduling meeting for all stakeholders on July 29th, 2016.

Please submit your beam requests for Schedule 131 using the online beam request application directly at <https://mis.triumf.ca/science/beam/request/home.jsf> or through the Experimenters' Dashboard at <https://mis.triumf.ca/science/dashboard.jsf>. Should you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

Barry Davids
Beam Scheduler
